SUMMARY

The only mobile engineer on a live quick-commerce app with **18K monthly users**: I rebuilt and launched its customer app, maintain its rider app, and own every release on Android and iOS. **17 apps live** on the Play Store and App Store in 2 years of React Native work.

EXPERIENCE

Diarch Group | React Native Developer

Jun 2026 – Present | Remote

DiarchGo is a quick-commerce delivery service running from 8 dark stores: **50K+ downloads, 18K monthly users, 4K daily users, ~200 orders a day**. Customer app: [Play Store](#), [App Store](#). Rider app: [Play Store](#), [App Store](#).

- **Own both mobile apps** (customer and rider, Android and iOS) as the only mobile engineer: shipped **11 store releases** in four months and hold the customer app at **99.87% crash-free users** (Google Play vitals, last 28 days).
- **Resolved live incidents** in the older app (React Native 0.80, Redux Toolkit): hotfixed a crash on the cart screen and released the fix the same day, and fixed push notifications that were not reaching iOS customers or were arriving twice.
- **Rebuilt the customer app from scratch and launched it**: 50+ screens in React Native 0.86 (New Architecture, Hermes) and strict TypeScript, with server data in TanStack Query (React Query), app state in 3 small Zustand stores, and a design system with light and dark themes that cut inline styles from 1,861 to 4.
- **Cut JS blocking time from 7.7 s to 0.3 s and dropped frames from 20.8% to 6.1%** in product lists: built a small profiling tool, found why memoization was silently failing, and fixed it. Re-renders fell from 86 per product card to none across the same eight-swipe scroll test.
- **Cut the Google Maps bill from ₹80K to ₹25K a month** across both apps: found calls repeating needlessly (distance re-fetched on every order update, address on every screen visit), then cached results on the device.
- **Built the first CI/CD pipeline** (GitHub Actions, Fastlane): one click builds, signs and ships to Play Store testing or TestFlight, then promotes to production. Added over-the-air (OTA) updates with Stallion so urgent fixes do not wait for store review.
- **Built checkout and live order tracking**: Razorpay with orders created and payments verified on the server, wallet and coupons; rider location in real time over socket.io. Fixed a bug that showed successful payments as failed and invited customers to pay twice.
- **Cut bundled images and assets from 10.3 MB to 1.3 MB** and the JS bundle from 9.1 MB to 6.9 MB against the old app, with SVG icons, compressed images and a pre-commit check that blocks raw images.
- **Built one typed REST API client** (Axios) for every API call: a single error format, and an expired login renewed in the background before the request is retried. Audited the APIs with the backend team and documented 14 fixes for slow queries.
- **Wrote a Kotlin native module** that reads the login OTP from SMS and fills it in automatically (Android SMS Retriever API).

SilverSky Technology | React Native Developer

Sep 2024 – May 2026 | Ahmedabad

Mobile app agency. Worked on **22 React Native apps** for clients; **15 are live**, including apps with 100K+ and 50K+ downloads.

- **Bizzmatch [Android, iOS]** (business networking, 10K+ downloads): made the app **~20% smaller** by removing unused media and replacing heavy libraries; built live face verification for profile photos (Vision Camera, ML Kit); added 6 languages, including right-to-left Arabic.
- **Eaziquote [Android, iOS]** (quotes and invoices for UK tradespeople): owned the mobile app end to end; added paid subscriptions (RevenueCat), push notifications with deep links and crash reporting (Firebase Crashlytics).
- **Upgraded React Native on three live apps**: Ahir Matrimonial [[Android](#), [iOS](#)] (0.73 to 0.84, 50K+ downloads), 5 Keys Communication [[Android](#), [iOS](#)] (0.68 to 0.81) and NoblCard (0.72 to 0.75).
- **Got two apps approved after four store rejections** by adding a guest mode that keeps the user's data after sign-up, switching to the Android Photo Picker, and adding search, bookmarks and medical sources (Sexual Disease and Infections [[Android](#), [iOS](#)], a health education app with 50K+ downloads).

SKILLS

Mobile: React Native (New Architecture, Hermes), TypeScript, JavaScript, React Navigation, Reanimated, FlashList

Performance and debugging: re-render profiling, list and app-size optimization, Firebase Crashlytics

State management and data: Zustand, Redux Toolkit, TanStack Query (React Query), REST APIs, Axios, socket.io, MMKV

CI/CD and release: Git, GitHub Actions, Fastlane, OTA updates (Stallion), Play Store and App Store releases

Integrations: Razorpay, RevenueCat, Firebase push notifications (FCM), Notifee, deep links, Google Maps Platform

EDUCATION

B.E. in Computer Engineering, Gujarat Technological University, CGPA 8.66

2020 – 2024
